- A responsive approach to project management with a focus on priorities

- Strategic road mapping using dynamic Gantt, grid, timeline and frames functionality

- Phase and Milestone features, helps you develop operational project plans

- Ensure project success with automatic generation of risks and issues

- Street smart project schedules automatically predict reliable finish dates, when things suddenly change.

Work Breakdown

Work breakdown functionality in PlanStreet provides clients with a detailed task resource and financial breakdown structure. Users can look at data by department, vendor, skill set, capital vs. operation expenditure, by regulatory vs. revenue vs. operational etc.

Using the Phase & Gate approach, the project execution processes helps you to build a conceptual and operational roadmap to take a new project from idea to launch.

Project Phases & Milestones

PlanStreet project development process can be structured into distinct, time-sequenced phases separated by management decision milestones.

Each phase is associated to a prearranged set of activities, deliverables and milestones that must be completed successfully before getting management approval to proceed to the next stage of project development.

Microsoft Projects Compatibility

PlanStreet offers seamless import and export utility with Microsoft Projects. Users can import project plans in mpp format straight to PlanStreet Grid and Gantt functionality. Import utility supports tasks, timelines, resources and much more.

Similarly, users can export project plans developed in PlanStreet back to Microsoft projects if needed. Compatibility runs across features and provides an option for users to work simultaneously in both PlanStreet and MS projects.
